

Government Framework

Ensuring Success and Reducing Risk with Technologies you Already Own

SOLUTION OVERVIEW

Microsoft is enabling digital transformation for state and local governments by providing them access to innovative cloud, productivity and business process solutions. These transformative technologies allow governments to improve engagement with citizens,

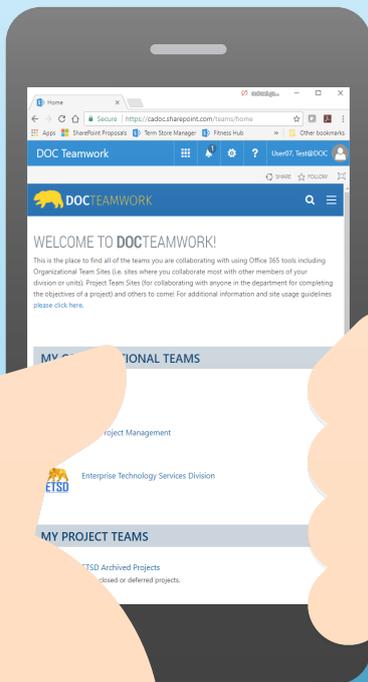

empower employees, and optimize operations. **Office 365** and Azure Cloud Services create an incredible opportunity for governments of all size to keep pace with the demand for technology in a socially connected, always-on world.

Taborda's Government Framework takes advantage of these

technologies in order to help governments be more sustainable, prosperous, and economically competitive using a simplified approach. It helps governments unlock their potential by delivering innovative digital services allowing staff the ability to focus on helping citizens lead safer, healthier, and more educated lives.

“The new user experience makes it so easy for our staff to find the things that are important to them. The intuitive design is user friendly and simple to navigate.”

- Catherine Kendall: CIO Department of Conservation

KEY BENEFITS OF OUR FRAMEWORK

Tailored Efficiency:

Quick and easy one-to-many communication that can be tailored to the audience and specific need.

Widespread Access:

Access to personal workspaces regardless of type.

Straightforward Navigation:

Simple and intuitive navigation to help direct users to key information.

Comprehensive Employee Management:

Employee search by key words, department, or other custom keywords.

Attractive User Experience:

The engaging user interface helps with user adoption.

Reduces Cost:

Our framework eliminates many of the false starts organizations make and focuses on driving better business

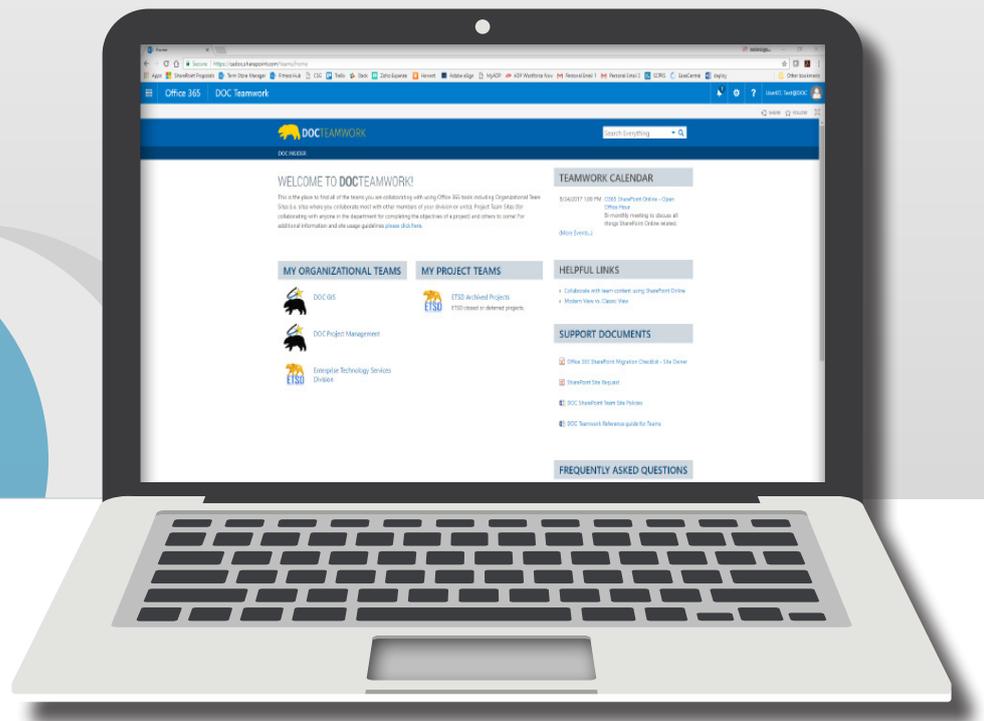

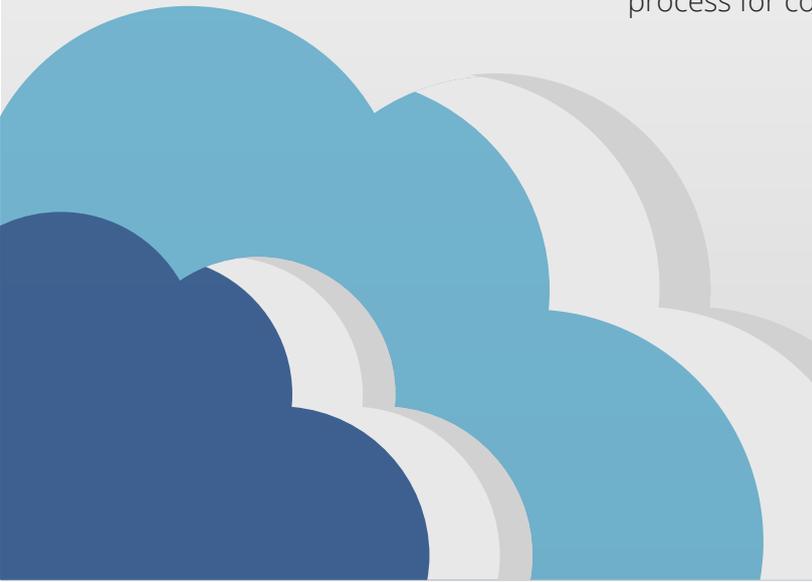

SOLUTION FEATURES

While **Office 365** and Azure provide governments with many powerful capabilities, there is no clear roadmap for easily implementing them in a way that meets a customer's expectations. With the potential of having access to technology normally unavailable, Government IT is initially excited about the potential and prospect of truly helping their users.

However, Government IT quickly becomes overwhelmed and frustrated by the sheer volume of available tools and no clear way of capitalizing on their potential. Government IT then becomes burdened with the high expectations of their end-users with no easy way of achieving them.

The Framework helps Government IT take control of their **Office 365** Tenant by tuning the tenant. Tuning the tenant is an automated process for configuring **Office 365**

based on best practices as it relates to Governments, not Microsoft. For example, many governments need/want auditing turned on so they can track access and monitor activity. By default, Office 365 has audit turned off. Many governments do not want to allow anonymous external document sharing, and would prefer to manage the external groups that it shares information with. Our process turns this off. Our Framework is built for government,

keeping in mind the unique requirements of the public sector. **Office 365** is more than just a place to store documents. The framework goes beyond just storing documents. The framework includes finding people, accessing critical business information and news, real-time alerting, compiling departmental calendars and events, and providing staff with a fully responsive, simple, single-point of entry to access all of their critical information, regardless of device or browser.

OUR CLOSING THOUGHTS

Taborda's Government Framework pre-configures many of the technologies that enable Government IT to quickly create a comprehensive government portal. The implementation is expedited while reducing the potential risk missteps or false starts can cause.

Our framework was developed through many conversations with state and local government subject matter experts, during the implementation of their intranets; influenced by lessons learned. These lessons learned have been codified into a framework that customers can utilize, implementing what makes sense for them and discarding what does not. Our framework is a flexible way of quickly achieving the overall objective of improving engagement with citizens, empowering employees, and optimizing operations.
